

Zone C closure overnight: *effective 10-4-23*

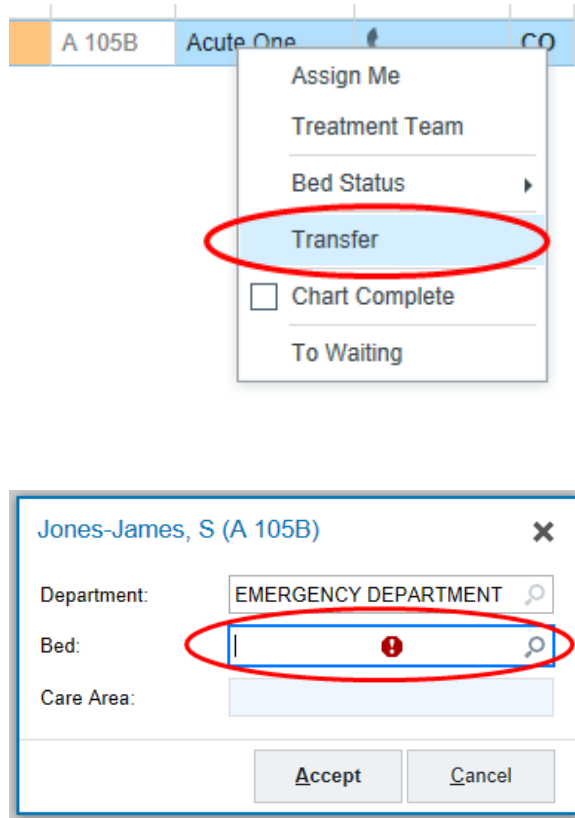

*Nightly transition huddle tasks:

- Determine which patients will be discharged and which will be moved to Zone A
- For patients moving to Zone A, assign: closed room vs open bay vs waiting area
- Ensure patients at Radiology at time of huddle are accounted for (see next slide):
 - RN transfers patient to a new location in Zone A
 - RN updates Patient Location to radiology

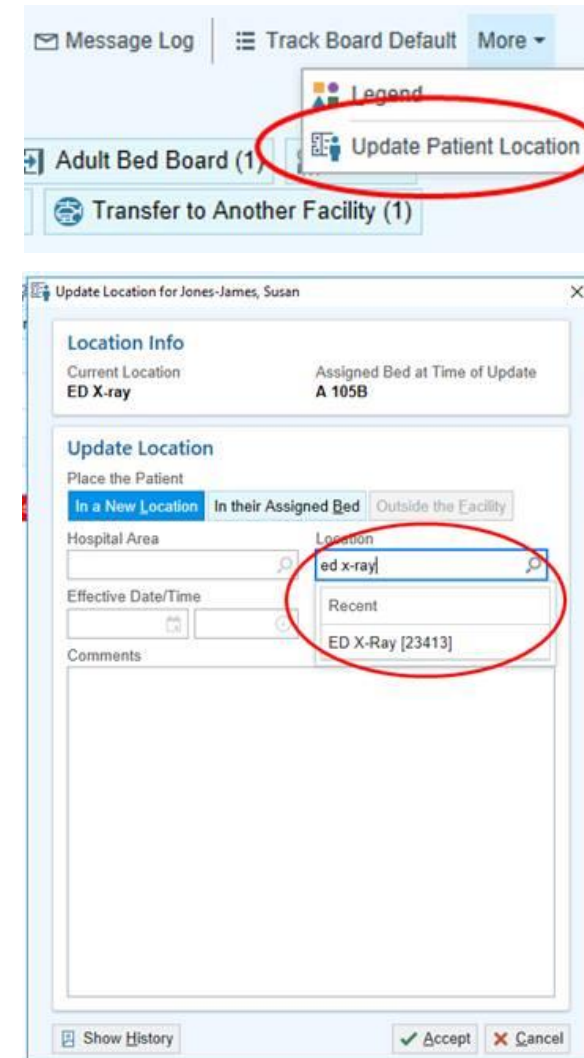

RN Workflow for patients who are at Radiology when move occurs:

1. Transfer the patient to a new bed in Zone A

The screenshot shows a patient bed management interface. At the top, there is a header bar with 'A 105B', 'Acute One', and 'CO'. Below this, a dropdown menu is open, displaying several options: 'Assign Me', 'Treatment Team', 'Bed Status', 'Transfer' (which is circled in red), 'Chart Complete' (with an unchecked checkbox), and 'To Waiting'.

2. Update the patient's location back to Radiology

The screenshot shows a multi-step process for updating a patient's location. The top section, 'Update Patient Location', includes a 'Legend' and buttons for 'Adult Bed Board (1)' and 'Transfer to Another Facility (1)'. The 'Update Patient Location' button is circled in red. Below this, a dialog box titled 'Update Location for Jones-James, Susan' is open. It contains a 'Location Info' section showing 'Current Location: ED X-ray' and 'Assigned Bed at Time of Update: A 105B'. The 'Update Location' section has three tabs: 'In a New Location' (selected), 'In their Assigned Bed', and 'Outside the Facility'. Under 'In a New Location', there are fields for 'Hospital Area' and 'Location'. The 'Location' field is circled in red and contains the text 'ed x-ray'. Below this is a 'Recent' list showing 'ED X-Ray [23413]'. At the bottom, there are 'Accept' and 'Cancel' buttons.

To be completed by Zone A Captain when patients are moved to Zone A
