

Patients evaluated using the Accelerated Diagnostic Pathway for Acute Coronary Syndrome who based on HEAR Score and Troponin results are determined to need 72 Hour Cardiology Follow Up who do not have a Cardiologist and are unable to establish care independently within 72 hours should have a referral placed. Patients evaluated at times when 72 hour follow up is unlikely to occur (prior to weekends) should be evaluated for possible RETU stay or admission to ensure an expedited work up for cardiac pathology.

To place a referral to Cardiology for 72 Hour follow up please go to the D/C Transfer Tab in the patient's chart on Epic

Click on the Orders/Prescriptions Section

In the Prescription/Referrals Section type in "MSH AMB REF TO CARD"
