### PURPOSE:

This clinical pathway is meant to assist in the rapid and consistent evaluation & treatment of pediatric patients presenting to the Emergency Department with symptoms concerning for nephrolithiasis.

### PATHWAY:

Clinician judgment should supplement and supersede any clinical guidelines, pathways or decision protocol. Departure from this guideline/pathway may be appropriate and necessary in certain clinical situations. The use of the pathway allows for an appropriate and uniform treatment in a population that has the potential to require emergent intervention.
