

Stroke BP parameters for Acute Ischemic Stroke, ICH, & SAH:

- **Ischemic Stroke**
 - no tPA: up to 220 mmHg
 - Pre tPA bolus target: BP < 185/110 (cannot receive tPA until **below** these values)
 - During infusion and post tPA target: BP < 180/105
 - Call MD if systolic BP drops below 90
- **ICH:** Sys BP 140mmHg – 160mmHG
 - Call MD if > 160mmHg
 - May use labetalol, hydralazine, nicardipine, cleviprex to lower
- **SAH:** Sys BP < 140mmHG
- If unable to maintain BP at target IMMEDIATELY ESCALATE to the ED MD and STROKE Team (refer to BP escalation guidelines)
- Activate a STROKE CODE if:
 - Patient begin to exhibits a change in Neuro Status
 - You do not get the response that you need from the team timely
